-

Introduction

- Project Topic
- with a web based software using for the website
- designing in web

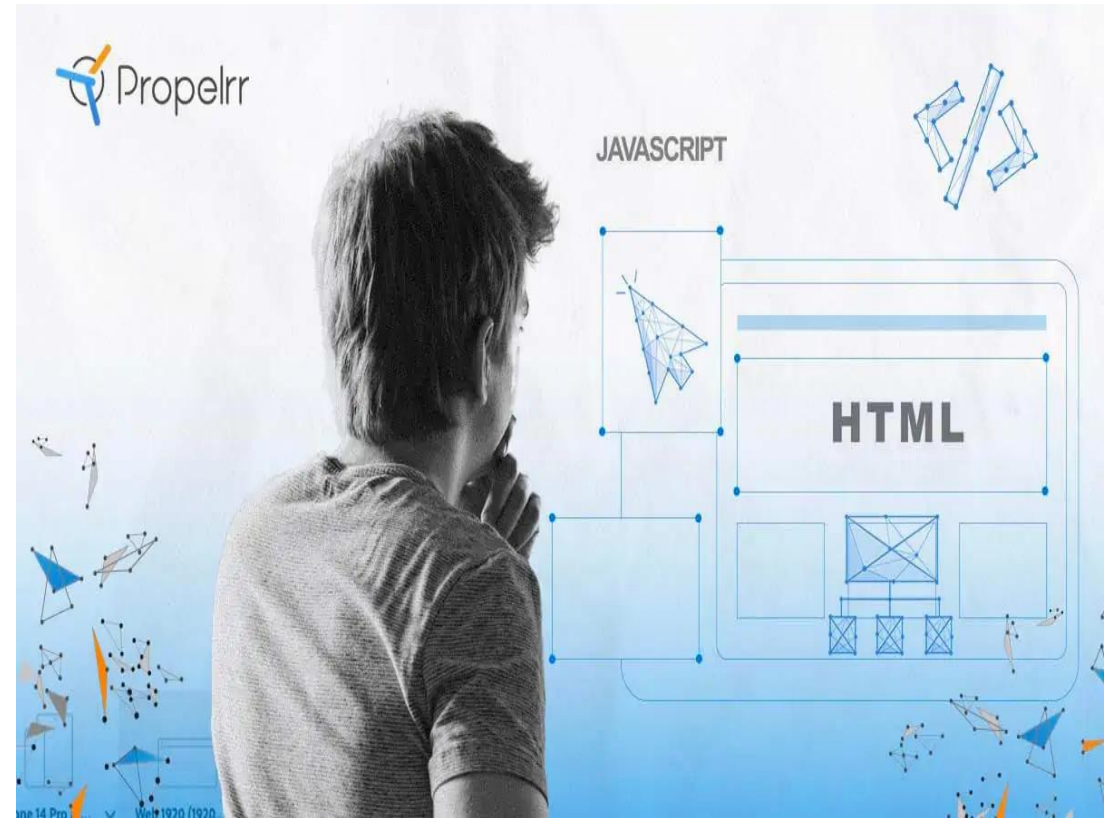

```
25
26 def check_db():
27     if not os.path.isfile(FILE_PATH):
28         db.create_all()
29
30 @app.route("/")
31 def home():
32     check_db()
33     all_books = db.session.query(Book).all()
34     return render_template("index.html", books=all_books)
35
36 @app.route("/edit", methods=['GET', 'POST'])
37 def edit():
38
39     if request.method == 'POST':
40         book_id = request.form['id']
41         book_to_update = Book.query.get(book_id)
42         book_to_update.rating = request.form['rating']
43         db.session.commit()
44         return redirect(url_for('home'))
```

- website designing is the website where it contains some contents in it
- ex:online shopping website ,movie website etc.,

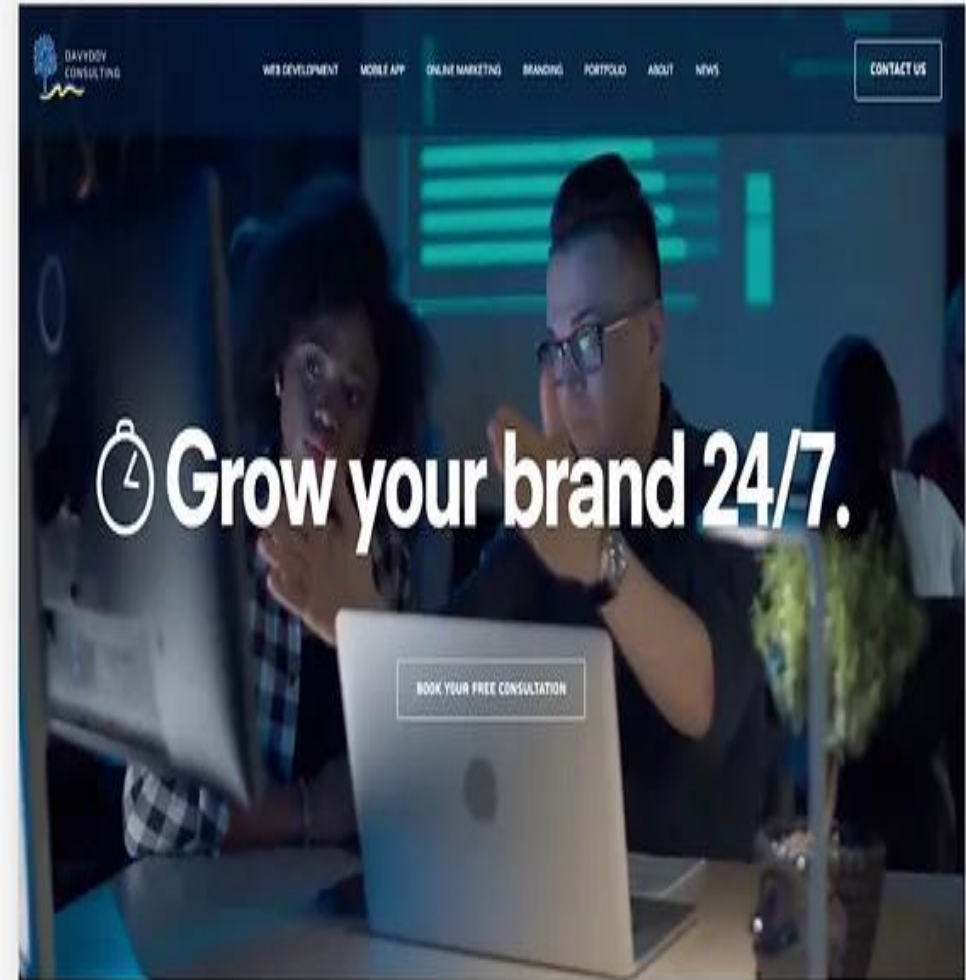

Design and Development

- html css and bootstrap
- languages are used for this project
- this project is done in my pc

Service offered

As we take an example most companies or organizations. Generally the companies are using this as for representing about their company details in it

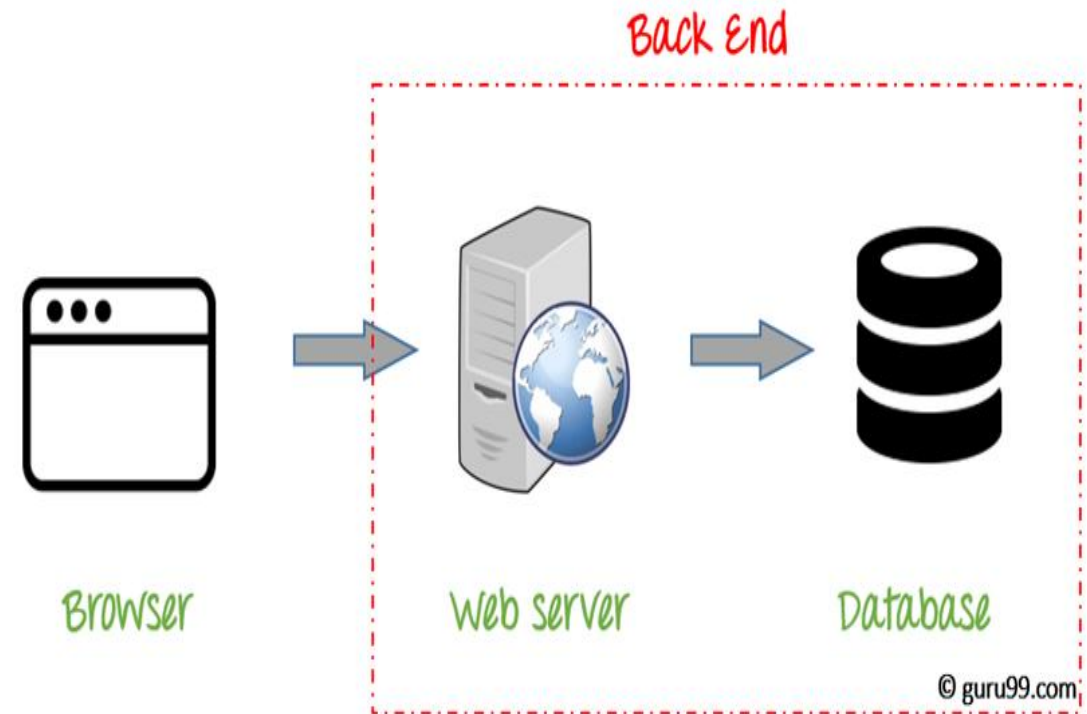

Who are the end users?

The user that contain most of the members and want to become store their favourite products

Solution and presentation

The system consists of software using authentication methods. Such as ID numbers. Then it automatically synced with back-end software.

THANK YOU
